

SOC INCIDENT REPORT

Risk Tier: CRITICAL

Technical Summary: Nine security alerts across seven systems showing suspicious file encryption patterns, lateral movement to your Active Directory domain controller, and command-and-control communications to known attacker infrastructure. Active ransomware targeting your file servers, domain controller, and HR systems threatens immediate operational shutdown and potential exposure of employee and vendor data.

Total Alerts: 9 **Triggers:** 1
LLM Enhanced: Yes (claude-haiku-4-5-20251001)

Threat Classification (LLM): Ransomware with Digital Extortion & Data Exfiltration

Priority Actions (0–1h):

- Block external IP 104.21.66.99 at perimeter firewall (ingress/egress)
- Block domains ns1.attacker-domain.com and Mega.nz at DNS/proxy layer
- Isolate srv-files-01.corp.local, ws-dev-05.corp.local, vendor-vpn-gw.corp.local from network
- Kill any processes executing acme-agent-2.4.1.msi on all endpoints
- Reset credentials for all users with access to affected file servers

Priority Actions (1–4h):

- Preserve forensic images of srv-files-01.corp.local, ws-dev-05.corp.local, dc-ad01.corp.local
- Audit Active Directory for lateral movement via compromised accounts
- Search EDR/SIEM for IOC indicators across all 7 affected assets
- Identify and isolate any additional hosts with outbound connections to 104.21.66.99
- Review VPN logs on vendor-vpn-gw.corp.local for unauthorized access patterns

Priority Actions (4–24h):

- Restore srv-files-01.corp.local and srv-hr-01.corp.local from clean backups
- Conduct full network segmentation audit and implement zero-trust controls
- Perform threat hunt for lateral movement indicators across domain
- Generate incident timeline and determine initial access vector
- Coordinate with legal/executive team regarding extortion demands and law enforcement notification

SIEM/EDR Threat Hunting Queries:

- Search for process execution: 'acme-agent-2.4.1.msi' OR 'acme-agent' on all endpoints; correlate with file modification timestamps on srv-files-01.corp.local
- Network IOC query: (src_ip=104.21.66.99 OR dst_ip=104.21.66.99) OR (dns_query=ns1.attacker-domain.com OR dns_query=Mega.nz) across last 30 days
- Lateral movement timeline: Track authentication events, SMB connections, and RDP sessions involving srv-files-01.corp.local, ws-dev-05.corp.local, dc-ad01.corp.local; identify privilege escalation patterns

Window: 08:07 – 08:26

Severity Breakdown:

Severity	Count
High	5
Critical	4

Trigger Timeline:

Timestamp	Alert ID	Category	Tier	Kill Chain
2026-04-24 08:07:00	W105	execution	MEDIUM-HIGH	EXECUTION
2026-04-24 08:10:00	W106	execution	MEDIUM-HIGH	EXECUTION
2026-04-24 08:14:00	W107	lateral_movement	HIGH	LATERAL_MOVEMENT
2026-04-24 08:14:45	W108	lateral_movement	HIGH	LATERAL_MOVEMENT
2026-04-24 08:17:00	W109	persistence	MEDIUM-HIGH	PERSISTENCE
2026-04-24 08:19:00	W110	persistence	MEDIUM-HIGH	PERSISTENCE
2026-04-24 08:22:00	W111	exfiltration	HIGH	EXFILTRATION
2026-04-24 08:23:00	W112	exfiltration	HIGH	EXFILTRATION
2026-04-24 08:26:00	W113	impact	CRITICAL	IMPACT

Indicators of Compromise (external only):

- 104.21.66.99
- acme-agent-2.4.1.msi
- ns1.attacker-domain.com
- Mega.nz

Affected Assets:

- srv-files-01.corp.local
- ws-dev-05.corp.local

- vendor-vpn-gw.corp.local
- dc-ad01.corp.local
- srv-hr-01.corp.local
- srv-finance-02.corp.local
- srv-finance-01.corp.local

Detected CVEs:

- No CVEs referenced in this window.
-

SOC Recommendations:

- Increase monitoring frequency on affected assets; review recent authentication events.

Recommended Actions:

- Isolate affected systems (srv-files-01, dc-ad01, vendor-vpn-gw, srv-hr-01, ws-dev-05) from the network immediately Security Operations Center
 - Initiate incident response and engage external forensics/ransomware negotiation firm Chief Information Security Officer
 - Preserve all logs and memory dumps from compromised systems before shutdown Forensics Team
 - Notify legal and insurance carrier; prepare NIS2 and GDPR breach notification templates Legal & Compliance
 - Activate backup recovery plan and test restoration from air-gapped backups Infrastructure & Disaster Recovery
-

Attack Vector Analysis: EXECUTION → LATERAL _ MOVEMENT → PERSISTENCE → EXFILTRATION → IMPACT
